

# HIPAA Risk Assessment

Current HIPAA and HITECH Act regulations require healthcare organizations to safeguard their patients' information – placing tough demands on medical practices to identify critical infrastructure vulnerabilities and to ensure overall data security and privacy.

Mitigating your practice's risk can be a complex and difficult process. CompuTech City makes it easy for you with our comprehensive HIPAA/HITECH Security Risk Assessment. Our team of healthcare compliance and IT experts visit your office armed with the latest guidance and resources from federal and state regulators, so nothing gets missed.

## **Our Security Risk Assessment provides...**

- ◆ An accurate and thorough analysis of your practice's current HIPAA/HITECH Security compliance status.
- ◆ A comprehensive security gap analysis and baseline remediation plan.
- ◆ An in-depth understanding of the security issues on which your organization needs to focus.
- ◆ A complete Security Risk Assessment, allowing your practice to meet Meaningful Use requirements updated to include the 2013 Final Omnibus Privacy & Security Rule requirements.
- ◆ Policies and procedures mandated by HIPAA that address security requirements and significantly reduce the time required to meet compliance.
- ◆ Natural hazards determination for disaster planning.
- ◆ HIPAA Security Rule audit to assess on the job performance of staff as they conduct their routine operations.

**Is your practice at risk? Ask yourself these questions. If you answered "YES" to any listed, your practice has security risks which should be addressed or at least evaluated.**

- Shared user names and passwords among staff members?
- Patient Health Information (Word documents, Excel spreadsheets, etc.) stored on unencrypted, unprotected laptops or workstations?
- Yet to appoint a Security Officer?
- Yet to implement background checks, training and non-disclosure agreements for all employees?
- Yet to collect signed Business Associate Agreement from all third parties who have access to your Patient Health Information?
- Simple passwords which don't expire or lock out after unsuccessful login attempts?
- Yet to perform a network evaluation or risk analysis?
- Physically unsecured server(s), laptops and workstations?
- A lack of updated virus and SPAM protection?
- Non-robust and undocumented backup process?
- Unauthorized and non-documented computer media destruction process?
